The “FUZZLESS” PEACH

New Fuzzless Peach Attracts Attention On Seattle Market

SEATTLE, Wn.—Candoka Peaches, something entirely new in the way of fuzzless peaches, were introduced to Seattle dealers for the first time this week. The attractive, bright color of the fruit, together with its very desirable large size, and last but not least—the fact that it is entirely fuzzless, has created considerable interest in local trade channels.

It is expected another few years will see the movement of sizable quantities of Candoka Peaches to the principal consuming markets. This season, a number of leading markets received small sample shipments, and from all reports it seems the fruit is being received with much favor.—N. W. Daily Produce News.

"THE SKIN YOU LOVE TO TOUCH" IS A NEW IDEA IN PEACHES

Pretty Jean Gorrie rubs against her cheeks two Candoka peaches, a new variety. They are without fuzz and predominantly deep red.

This NEW Glorious PEACH Offers Exceptional Money Making Opportunities for Peach Growers Everywhere
A TESTIMONIAL FROM YAKIMA

I was fortunate enough to see the Candoka peach on the trees in your experimental plot during July. At that time I was very favorably impressed with the possibilities of this peach. The peaches you shipped us arrived in excellent condition. I think they were in even better condition than either the Elberta or J. H. Hale.

CURTIS C. ALLER, Field Manager, Yakima Fruit Growers Assn., Yakima, Wash.

HISTORY and DESCRIPTION of the CANDOKA PEACH

This remarkable peach originated as a chance seedling in an orchard near Tonasket, Washington. While inspecting the orchard in late August of the year 1927, Mr. A. T. Gossman, President of the Columbia & Okanogan Nursery Company, discovered the tree with a very heavy load of very large, gloriously red ripening fruit. The marvelous color of the fruit attracted his attention and while some distance from the tree, it appeared to be loaded with large, deep red apples. The fruit not only had this intense deep red color wherever exposed to the sunlight, but the skin was exceptionally smooth, being nearly free of fuzz or down. It was found to have excellent flavor and to be so exceptionally firm that it would be a good shipper. It can be left on the tree until nearly tree ripened, thus assuring the consumer a peach with a tree-ripe flavor. This is very important as most varieties of peaches must be picked green in order to withstand shipping. As a result, they often arrive on the market somewhat withered and with inferior flavor.

The nursery company obtained exclusive propagating rights and, after testing it thoroughly over a period of six years, obtained a Plant Patent. Many expert horticulturists, shippers and growers have seen the fruit on the trees, have observed its shipping qualities and have eaten the fruit. Without exception they have been loud in its praises.

To sum up the Candoka peach has the following characteristics:

Color—Deep yellow to flaming red, this brilliant color is very striking;
Skin—Nearly as smooth as a nectarine, it has been described as "Fuzzless;"
Size—Very large, about the same as J. H. Hale;
Flavor—Excellent, sweet and pleasing, similar to the Hale but without the slightly bitter after taste of that variety;
Yellow Freestone—Exceptionally firm, almost as solid as a clingstone. It can be left on the tree until almost tree ripe before picking for shipment.
Shipping Qualities—The best we have observed in any tree stone peach;
Ripening Season—About the same as J. H. Hale.
Trees very hardy. The original tree has withstood a spring frost that killed the blossoms on a J. H. Hale tree adjoining—whereas the Candoka bore a full crop. We believe it is the most valuable peach ever discovered.

The Perfect Peach
A BLAZE of GLORIOUS COLOR

FUZZLESS
DELICIOUS FLAVOR
AN Excellent Shipper

INDORSEMENTS from those who have SEEN and EATEN CANDOKA PEACHES

NEW YORK STATE

Dr. H. H. Newcomb, New York City: "We have just received a new variety of peach, the CANDOKA, which we believe to be the finest variety of peach ever introduced into commerce. It is superior to any other variety of peach known to us." Dr. Newcomb is the director of the New York State Agricultural Experiment Station.

MISSOURI HAD TO BE SHOWN

Asst. Supt. C. E. Wood, Supt. Fruit, Agriculture Dept., Missouri State University: "We have had a wonderful season with the CANDOKA peach, which is now considered the finest variety of peach grown in Missouri. Its flavor is delicious and its texture is firm and juicy."

CHAS. SEIDEL, Secretary and Treasurer, Missouri State University

EXPERT TESTIMONY

Richard Wellington, Chief Entomologist, New York State Department of Agriculture: "The CANDOKA peach is one of the finest varieties of peach ever introduced into commerce. It is superior to any other variety of peach known to us."

COLUMBIA & OKANOGAN NURSERY COMPANY
(The Wenatchee Nursery)

WASHINGTON

Supt. C. E. Wood, Supt. Fruit, Agriculture Dept., Washington State University: "The CANDOKA peach is the finest variety of peach ever introduced into commerce. It is superior to any other variety of peach known to us."

C. A. WILSON, President, Washington State University

WENATCHEE, WASHINGTON

Peaches the mortgage lifter

NEARLY two million boxes of peaches have been received in this State during the past month. This is a record for Washington and a significant increase over previous years. However, the market is not as favorable as it was last year. Prices have dropped, and there is a surplus of peaches available.

RICHARD WILSON, DEPUTY AGENT, DEPARTMENT OF AGRICULTURE, WASHINGTON STATE

CALIFORNIA WANTS A CARLOAD

We received your circular on the new CANDOKA peach variety. We are interested in purchasing a carload of this variety for our distribution in California. Please send us more information on the CANDOKA.

C. A. GLASS & CO., Inc., Fruit and Produce Wholesalers, Los Angeles, California.
Our nursery was established in the Wenatchee Valley, Washington, in 1906, and since that time has supplied a very large part of the extensive plantings of fruit trees and other nursery stock which has been planted in Central Washington.

We have tested and introduced more worth while varieties of fruit than any other nursery in the west. It costs the grower no more to raise the better varieties, than it does to raise the ordinary ones. The profit is in the better grades. Our stock being Northern grown has good vitality. We ship to all parts of the world—wherever deciduous fruit is grown.

Some of Our Valuable New Varieties

**BLACKJON**
An early-coloring, deep-red strain of Jonathan. It is replacing the common Jonathan—everywhere.

**RICHARDED**
The Deliciou supreme
The best strain of Delicious, early, solid-red color.

**BLACKMACK**
A real Stayman, but much more attractive; deep-red color better keeper, less loss from windfalls. Does not crack on the tree like Stayman. Much higher percentage of Extra Fancy grade.

**RED ROME**
A dark solid-red Winesap a much greater percentage of the fruit grades "Extra Fancy."

**BLAUXTAYMAN**
A very early-season apricot-large, excellent quality, good shipper, can be marketed ten days before

Our Modern packing house and display grounds where stock is properly cared for. An up-to-date ventilating system keeps stock in dormant condition for late spring planting.
